Savannah River Site

2015 Environmental Monitoring Program Data Report

Volume II

Prepared by
Savannah River Nuclear Solutions, LLC
Savannah River Site

PREFACE

The SRS Environmental Monitoring Program consists of both nonradiological and radiological monitoring of the environment within the SRS boundary and a 2,000-square-mile area beyond the Site's boundary. The purpose of this monitoring is to determine impacts, if any, from SRS operations to the surrounding communities and the environment.

This document presents data from Savannah River Site (SRS) routine effluent monitoring, environmental surveillance and groundwater monitoring programs. Volume I presents the routine effluent monitoring and environmental surveillance data. Volume II presents the groundwater monitoring program data. Information in this document is summarized in the *Savannah River Site Environmental Report for 2015* (SRNS-RP-2016-00089), referred to hereafter as the ASER. Every effort has been made to present the data in this report in the same order in which it is discussed in the ASER.

The data provided in this report is used to:

- Meet requirements of multiple environmental permits under which SRS operates,
- Meet requirements of DOE Order 458.1, "Radiation Protection of the Public and the Environment," that established as annual public dose standard for the public and biota dose limits for plants and animals that are at levels that would provide protection of the public and environment from the effects of radiation resulting from DOE activities,
- Meet groundwater sampling requirements identified in the Federal Facility Agreement for the Savannah River Site approved monitoring plans and Resource Conservation and Recovery Act permits.

Tritium Results from Monitoring Wells Located in Burke and Screven Counties, Georgia
